

Docket No. RSW920000164US1

CLAIMS:

What is claimed is:

- 1 1. A method for configuring a network, comprising:
2 configuring a first device for use in the network;
3 storing first configuration information for the first
4 device on a storage device;
5 reading the first configuration information from the
6 storage device at a second device; and
7 configuring the second device for use in the network
8 based on the first configuration information,
9 wherein the step of configuring the first device and the
10 step of configuring the second device are performed prior
11 to networking the first device and the second device.
12
- 1 2. The method of claim 1, wherein the step of
2 configuring the first device comprises configuring a host
3 application.
- 1 3. The method of claim 2, wherein the first
2 configuration information includes a host address.
- 1 4. The method of claim 2, wherein the step of
2 configuring the second device comprises configuring a

Docket No. RSW920000164US1

1 client application to communicate with the host application
2 over the network.

1 5. The method of claim 3, wherein the host application
2 is selected from a list of possible host applications for
3 the client application.

1 6. The method of claim 1, further comprising:
2 storing second configuration information for the second
3 device on the storage device.

1 7. The method of claim 1, wherein the step of
2 configuring the second device comprises generating default
3 values based on the first configuration information.

1 8. The method of claim 1, wherein the step of
2 configuring the second device comprises copying the
3 configuration of the first device.

1 9. The method of claim 1, wherein the storage device is
2 a floppy disk.

1 10. A method for configuring a network, comprising:
2 reading first configuration information, for a first
3 device configured for use in the network, from a storage
4 device at a second device; and

Docket No. RSW920000164US1

1 configuring the second device for use in the network
2 based on the first configuration information,
3 wherein the step of configuring the second device is
4 performed prior to networking the second device.

1 11. The method of claim 10, wherein the first
2 configuration information includes a host address.

1 12. The method of claim 11, wherein the step of
2 configuring the second device comprises configuring a
3 client application to communicate with a host application
4 at the host address over the network.

1 13. The method of claim 2, wherein the host address is
2 selected from a list of possible host addresses for the
3 client application.

1 14. The method of claim 10, further comprising:
2 storing second configuration information for the second
3 device on the storage device.

1 15. The method of claim 10, wherein the step of
2 configuring the second device comprises generating default
3 values based on the first configuration information.

Docket No. RSW920000164US1

1 16. The method of claim 10, wherein the step of
2 configuring the second device comprises copying the
3 configuration of the first device.

1 17. The method of claim 10, wherein the storage device
2 is a floppy disk.

1 18. An apparatus for configuring a network, comprising:
2 first configuration means for configuring a first device
3 for use in the network;
4 storage means for storing first configuration information
5 for the first device;
6 reading means for reading the first configuration
7 information from the storage device at a second device; and
8 second configuration means for configuring the second
9 device for use in the network based on the first
10 configuration information,
11 wherein the first device and the second device are
12 configured prior to networking the first device and the
13 second device.

1 19. The apparatus of claim 18, wherein the first
2 configuration means comprises means for configuring a host
3 application.

Docket No. RSW920000164US1

1 20. The apparatus of claim 19, wherein the first
2 configuration information includes a host address.

1 21. The apparatus of claim 19, wherein the second
2 configuration means comprises means for configuring a
3 client application to communicate with the host application
4 over the network.

1 22. The apparatus of claim 19, wherein the host
2 application is selected from a list of possible host
3 applications for the client application.

1 23. The apparatus of claim 18, wherein the second
2 configuration means comprises means for generating default
3 values based on the first configuration information.

1 24. The apparatus of claim 18, wherein the second
2 configuration means comprises means for copying the
3 configuration of the first device.

1 25. The apparatus of claim 18, wherein the storage means
2 comprises a floppy disk.

1 26. An apparatus for configuring a network, comprising:

Docket No. RSW920000164US1

1 reading means for reading configuration information, for
2 a first device configured for use in the network, from a
3 storage device at a second device; and

4 configuration means for configuring the second device for
5 use in the network based on the first configuration
6 information,

7 wherein the second device is configured prior to
8 networking the second device.

1 27. The apparatus of claim 26, wherein the configuration
2 information includes a host address.

1 28. The apparatus of claim 27, wherein the configuration
2 means comprises means for configuring a client application
3 to communicate with a host application at the host address
4 over the network.

1 29. The apparatus of claim 28, wherein the host address
2 is selected from a list of possible host addresses for the
3 client application.

1 30. The apparatus of claim 26, wherein the configuration
2 means comprises means for generating default values based
3 on the configuration information.

Docket No. RSW920000164US1

1 31. The apparatus of claim 26, wherein the configuration
2 means comprises means for copying the configuration of the
3 first device.

1 32. The apparatus of claim 26, wherein the storage
2 device is a floppy disk.

1 33. A computer program product, in a computer readable
2 medium, for configuring a network, comprising:
3 instructions for configuring a first device for use in
4 the network;
5 instructions for storing first configuration information
6 for the first device on a storage device;
7 instructions for reading the first configuration
8 information from the storage device at a second device; and
9 instructions for configuring the second device for use in
10 the network based on the first configuration information,
11 wherein the first device and the second device are
12 configured prior to networking the first device and the
13 second device.

1 34. A computer program product, in a computer readable
2 medium, for configuring a network, comprising:
3 instructions for reading first configuration information,
4 for a first device configured for use in the network, from
5 a storage device at a second device; and

[illegible]
